Election/Restriction

Applicant's election of group I, claims 1-11 with traverse is acknowledged. The traversal is on the grounds that the restriction requirement is unnecessary since both groups pertain to the same subject matter. In response, the examiner disagrees because a bolt as an article does not include the same subject matter as the method of making the bolt. Indeed, there numerous method of making the bolt not requiring a cold forming die, as such the die required of the method claims provides an example of divergent subject matter.

Accordingly, the restriction requirement is maintained and claims 12-20 are withdrawn as being not elected with traverse.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4, 6, 7 and 9-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hindle (H1258). Hindle discloses a fluid flow bolt (see Fig 3) comprising a enlarged head (32) and a plurality of three equally spaced channels (50) formed on the shank extending from an end towards the head completely through the threading

(see Fig. 3). The channels formed to have a depth shown to be at least 15% greater than the thread height.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hindle as applied to claims 1, 6 and 7 above, and further in view of Schiefer (US 4,730,966). Schiefer discloses channels (13') formed in a threaded portion of a bolt to have a V-shaped cross-section (see Fig. 3). At the time the invention was made, it would have been obvious for one of ordinary skill in the art to make the channel of Hindle in a V-shape as disclosed in Schiefer in order to save on material as discussed therein.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hindle as applied to claims 1 above, and further in view of Terrizzi (US 5,407,312). Terrizzi teaches the equivalence of spiral (Fig. 8) and longitudinal channels (Fig. 1). At the time the invention was made, it would have been obvious for one of ordinary skill in the art to make the longitudinal channel of Hindle in a spiral in view of the teaching of Terrizzi.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
